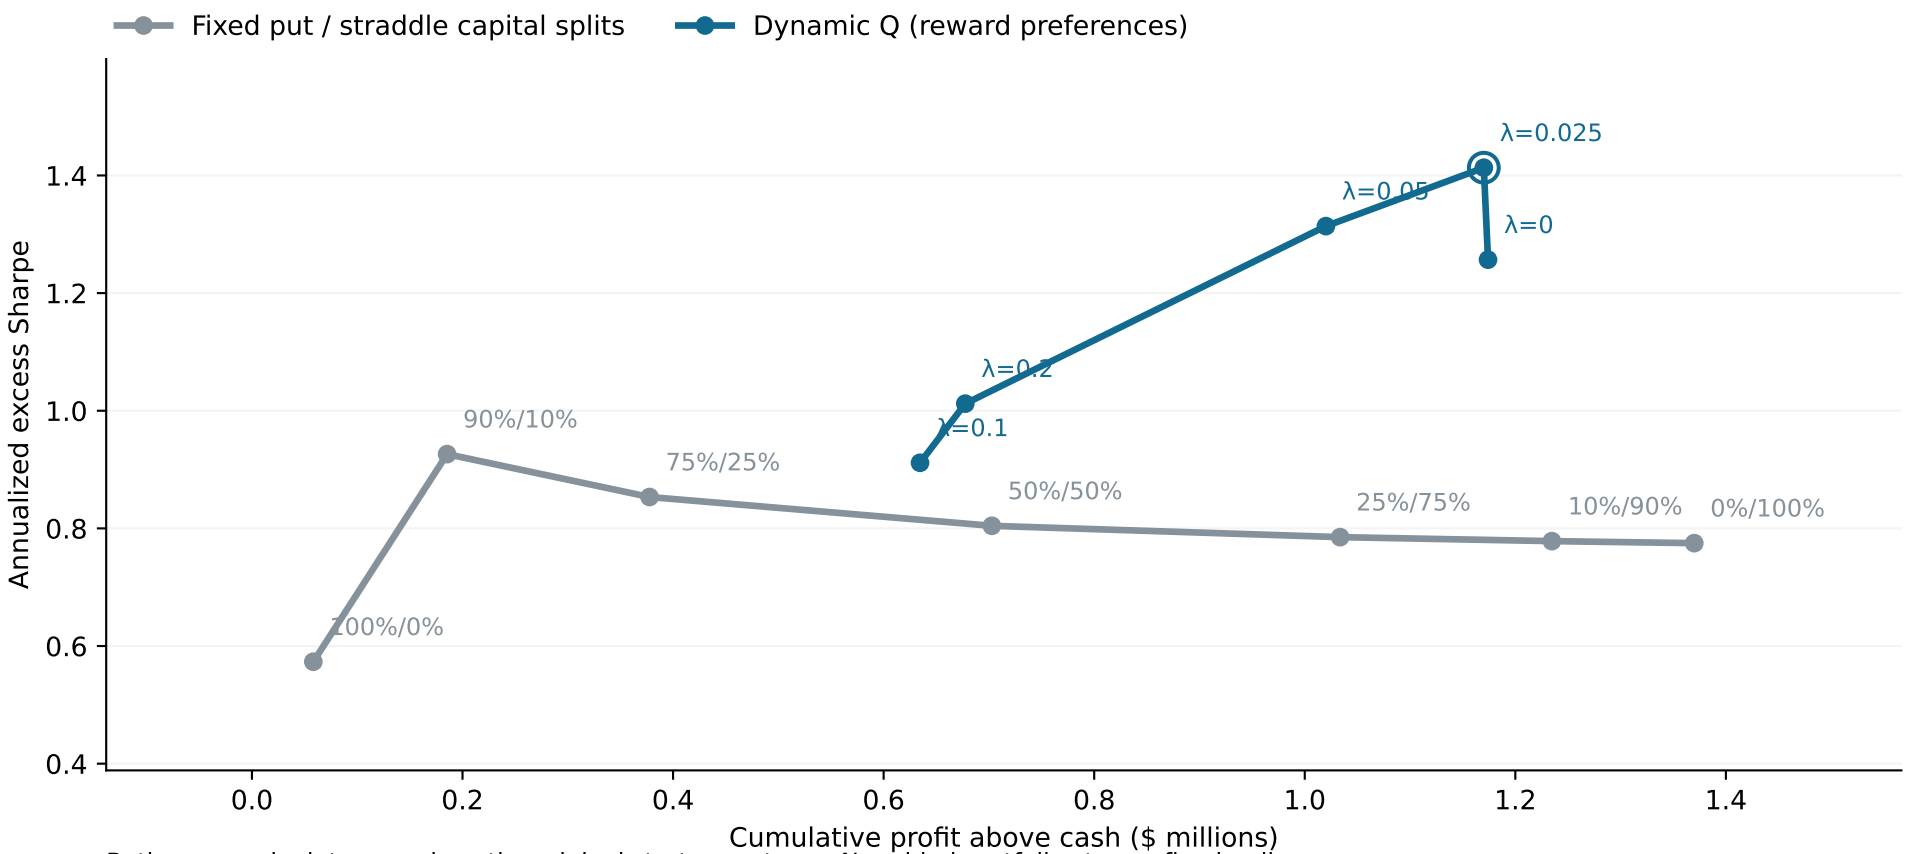
Fixed versus dynamic allocation across two signals

2018–2021 validation · Best put-pair bandit + best straddle bandit · One capital budget



Both pure endpoints reproduce the original strategy returns. No added portfolio stop or fixed-policy warmup.

Q changes the capital split weekly; fixed portfolios keep their target split. Both pay the same resizing-cost model.

All preferences shown; ring marks validation-selected Q. Q uses 50/50 until 52 completed weeks. Previously researched dates.
